

RAPID TRENCH Taking Pride in Your Work

Repeated contractor field experience, demonstrates a 70% labor reduction.

With a support bracket providing horizontal and vertical adjustment, and a rigid frame to positively link channels, the Rapid Trench system makes it easy to take pride in your work

Rapid Trench C1000 Series trench drain installation system was designed specifically to meet the needs of the commercial contractor. In field evaluations, using a variety of trench drains in various construction environments, Rapid Trench has consistently been shown to save 70% on labor, while also creating a precise and true installation.

The simple, effective, and economic installation approach:

1. Purchase or rent the 3-meter steel alignment frames
2. Requires half the brackets required of the traditional installation approach
3. 70% labor savings
4. Higher quality results

One 3-meter alignment frame supporting 3 channel sections and a catch-basin.

Challenges of the Traditional Installation Approach

- 1 Aligning each one meter individual channel section.
- 2 Special effort required to align and tie in a catch basin.
- 3 Forming a straight installation over any length.
- 4 Limited ability to adjust support bracket to properly align channel.
- 5 Unstable support brackets.

Advantages of Rapid Trench

- With its 3-meter rigid frame, Rapid Trench aligns three one meter sections at a time, streamlining the process.
- The stout alignment frame supports the catch basin without added bracing.
- With its tongue and groove alignment frame, maintaining a straight installation is easy.
- The Rapid Trench support bracket is easily adjusted both vertically and horizontally, providing precision adjustment.
- Job sites have a lot of activity. The Rapid Trench System provides stout and sturdy support brackets that protect your work until concrete is poured.
